

This guide is to set up and use Fathom. Please look for the yellow arrow

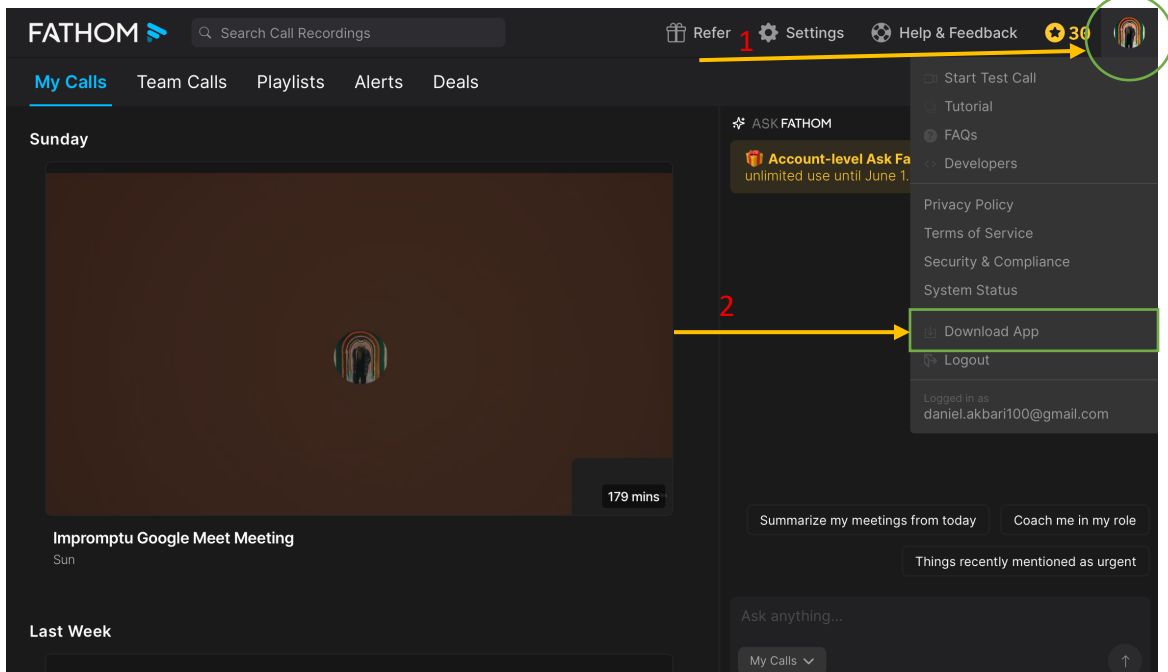

And the green rectangles  in the pictures.

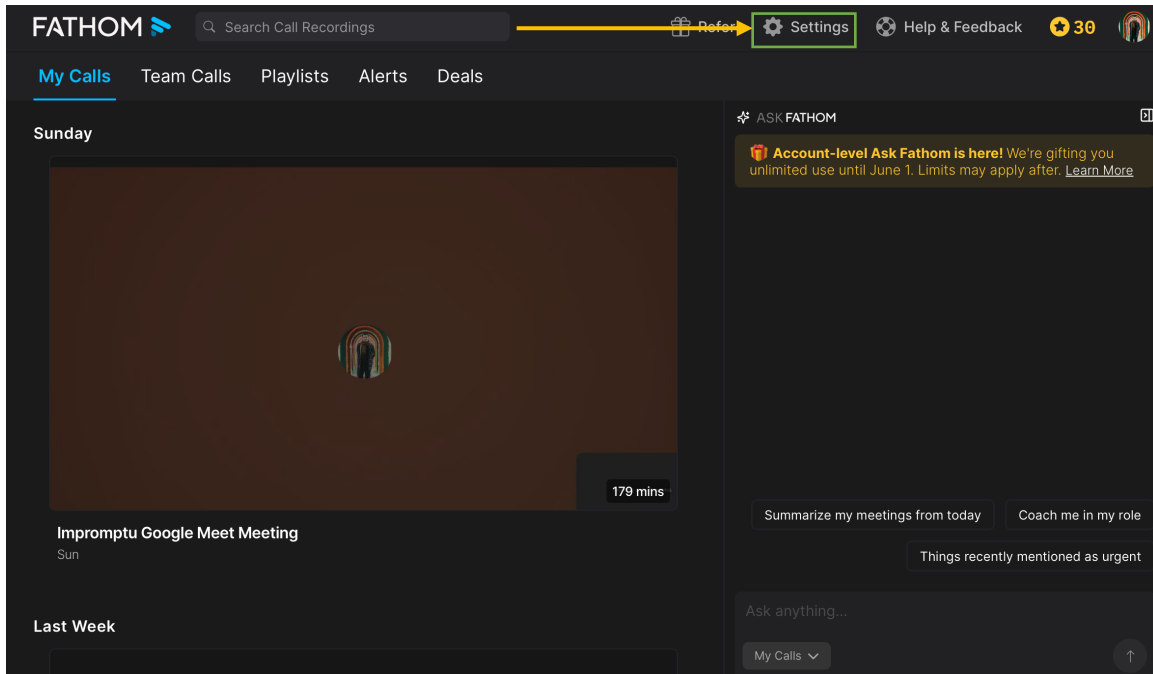

Go to fathom.video and create your free account:

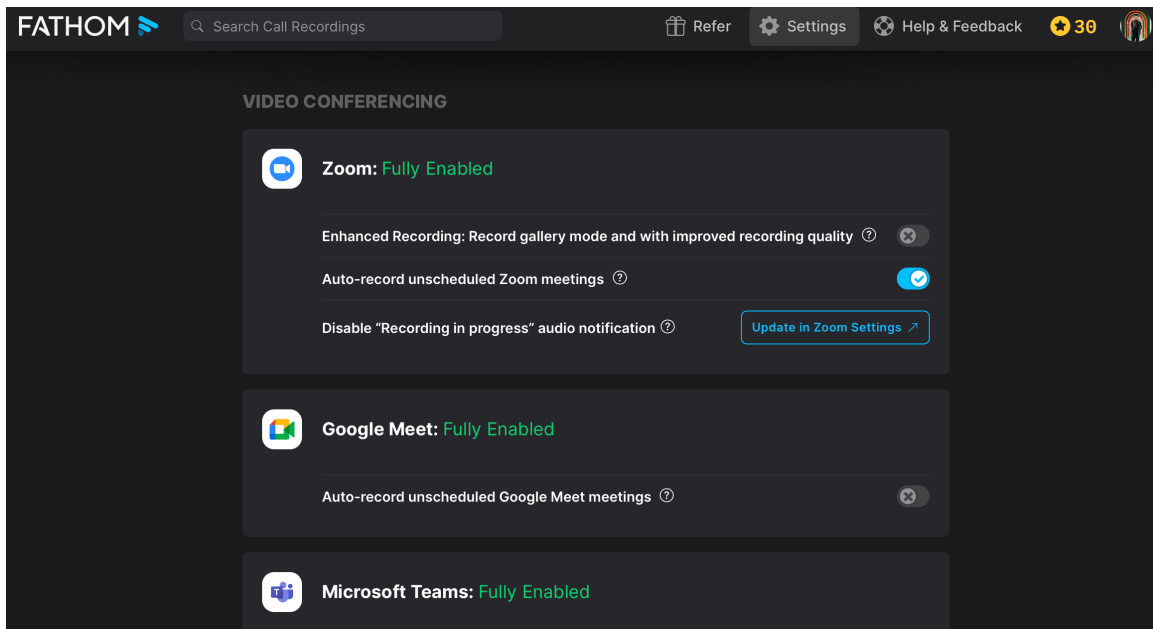

Click on your profile and download the app in case you haven't already:

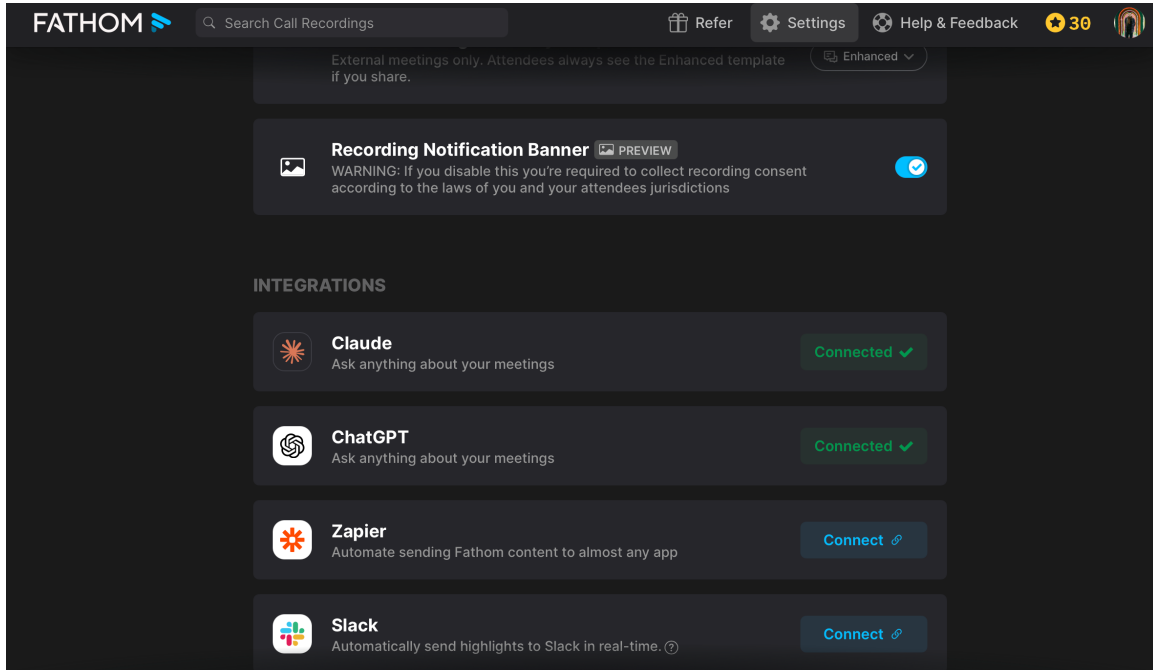

Go to **Settings**:

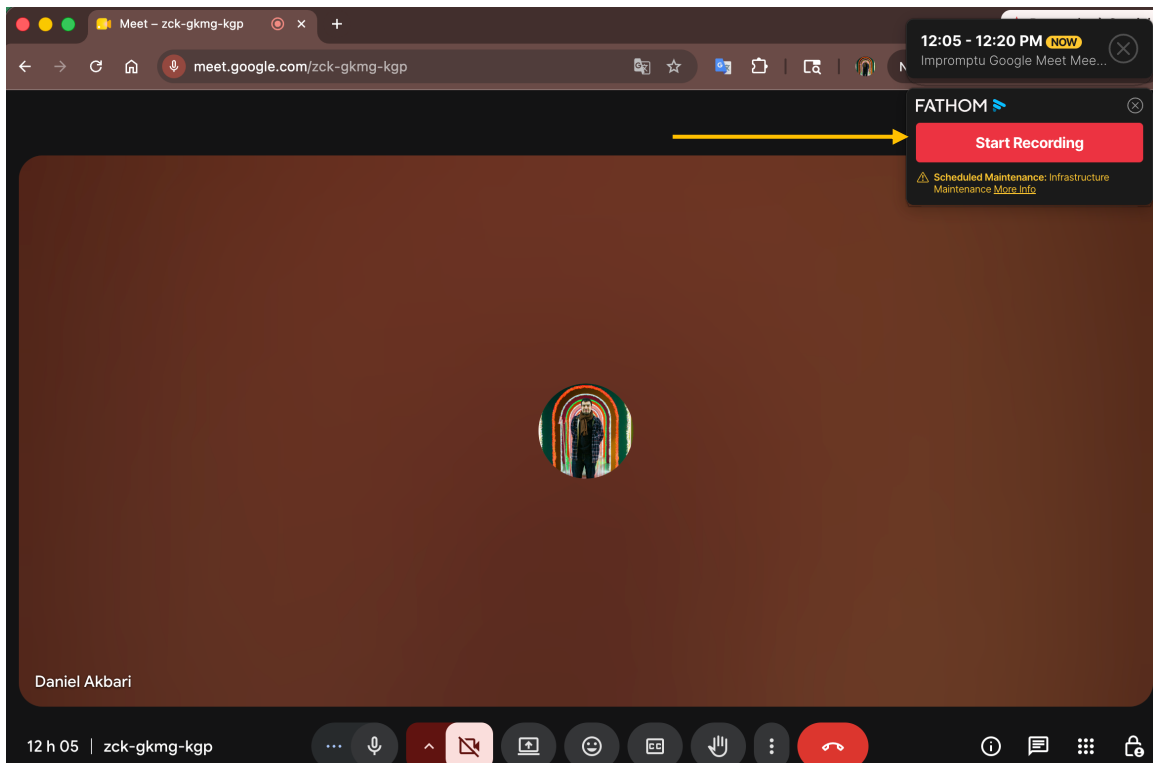

Enable recording for whatever platform you want. Note that for Google Meet you need to install the Chrome Extension and have the meeting in Chrome for the bot to be able to automatically start recording with the app. Otherwise you'd have to manually give the meeting link to the app for the bot to join the meeting.

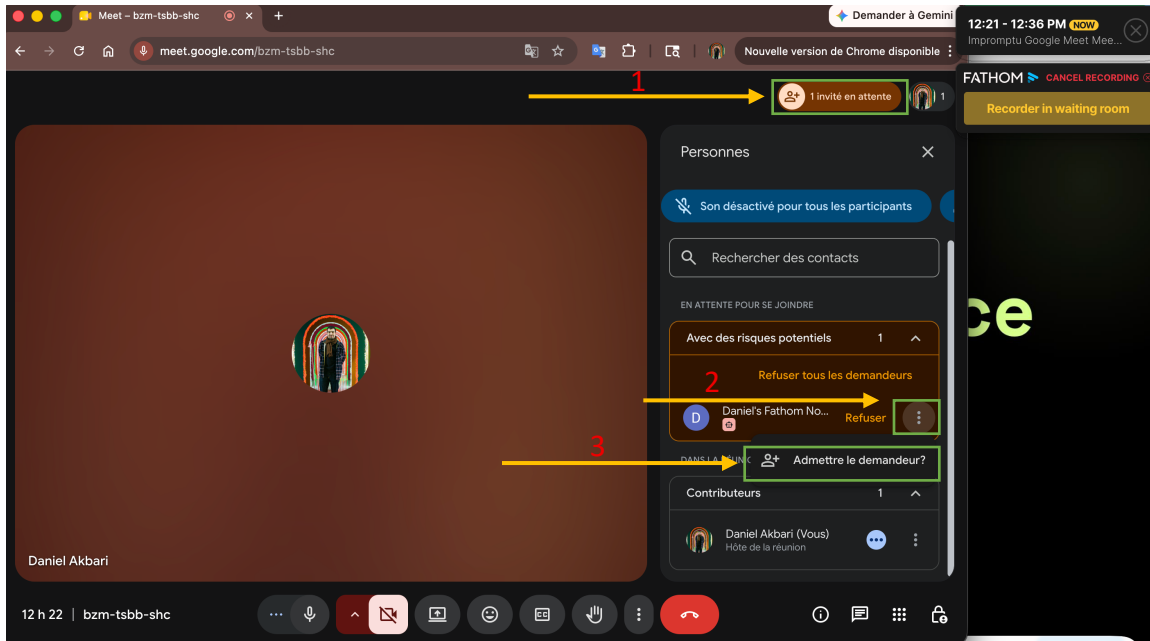

Scroll down in the same Settings page until you reach the Integrations section. Enable any integration you want, especially ChatGPT or Claude which will be used to generate the action items (the built-in Fathom action item generation only works the first 30 days after the creation of your account, it's a paid feature after that).

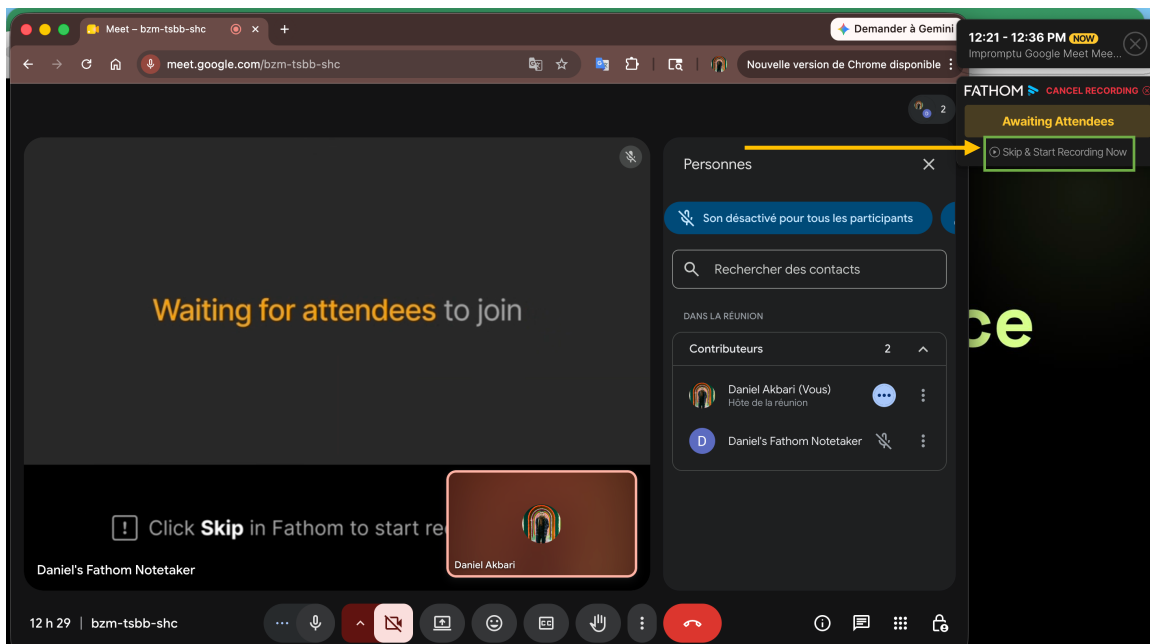

Now you can start a meeting; open the app and click “Start Recording”:

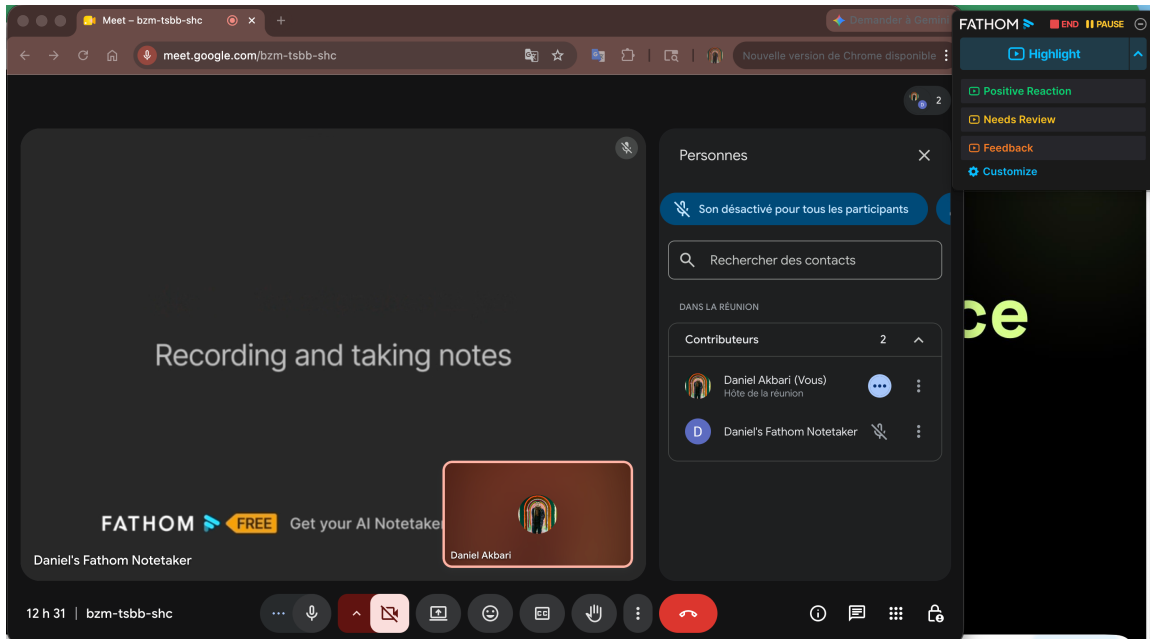

You might need to let the bot in the meeting from the waiting room:

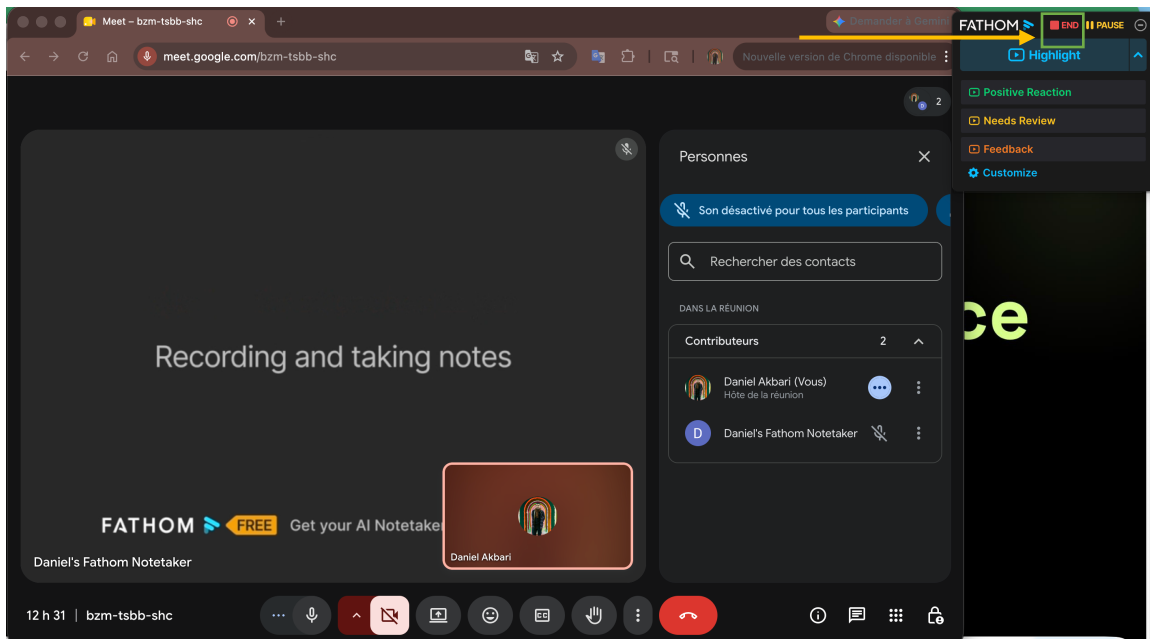

To start the recording if you're alone in the meeting, hover on the “Awaiting Attendees” button and click “Skip & Start Recording Now”:

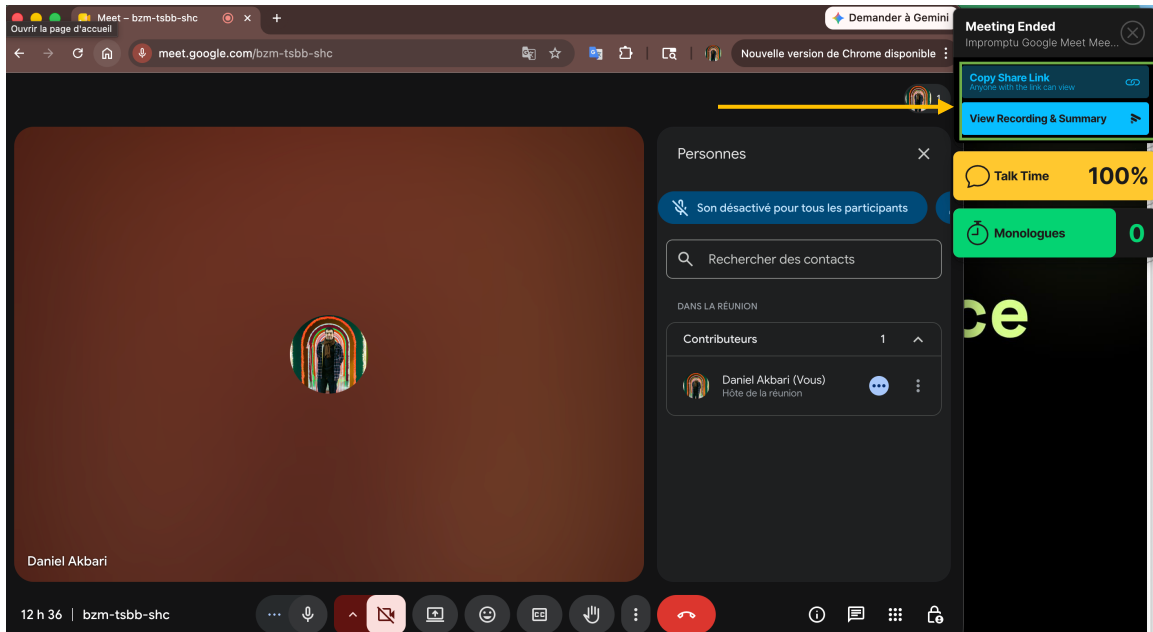

Now Fathom will be recording the meeting like this:

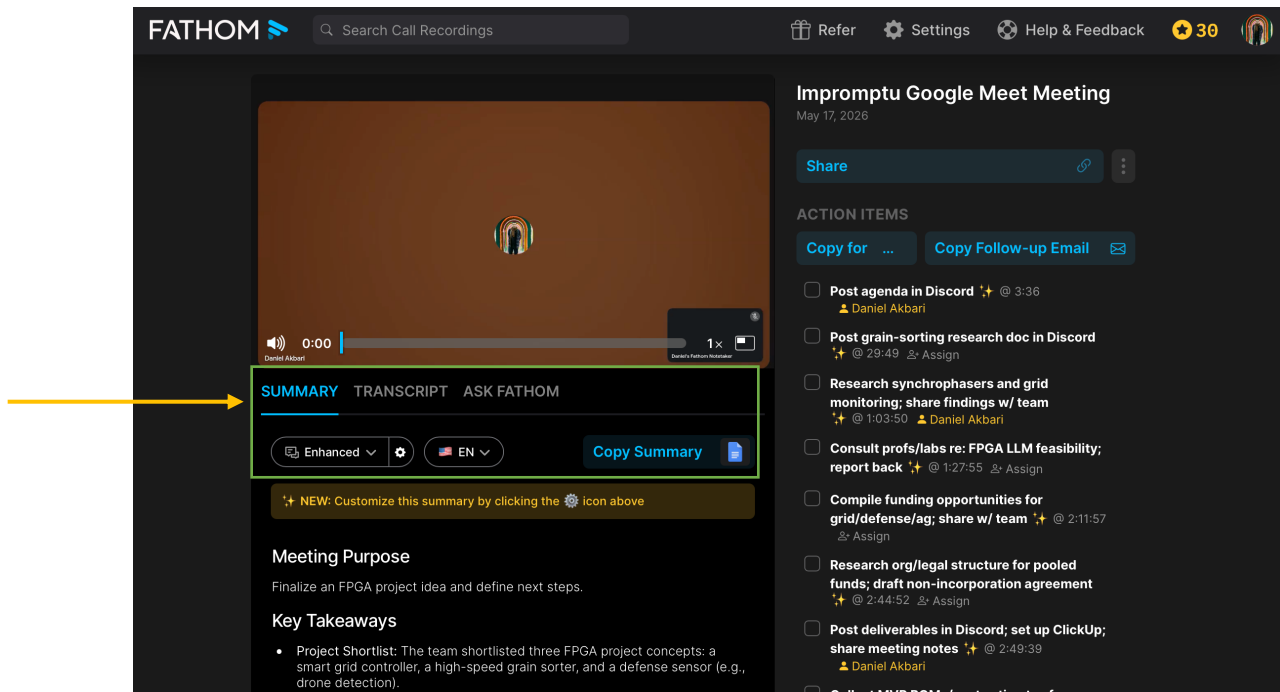

Once the meeting is over, click **END** to end the recording:

Now you can share the recording link and view the recording transcription and summary

Once you click “**View Recording & Summary**”, you will be greeted with this page where you can view the summary, transcript, and ask the built-in AI questions about the meeting.

If you want to ask ChatGPT about the meeting, go to ChatGPT. In a new chat, click the + button, click **More** and choose **Fathom**, then ask away :

ChatGPT

can u give me action items for the last meeting we had

Réponse de l'application reçue

Here are the action items from your latest meeting, the 2026-05-17 "Impromptu Google Meet Meeting":

Action Items

- Post agenda in Discord — assigned to Daniel Akbari
- Post grain-sorting research doc in Discord
